

# Sorting Out Software

No one ever said choosing the perfect tax preparation software is easy. You may have tried one package; you may have tried several. And, over the years, you've learned that the must-have features for one preparer may not matter much to another. We can all agree, however, that what's important is having a package that satisfies both your business needs and your budget. As NATP Board Member, Jean Millerchip of Nutley, NJ, says, "It must be reliable, affordable, fairly easy to use, and have top-notch customer support."

What concerns NATP member, Leonard Steinberg, from Princeton Junction, NJ, most, however, is the reduction in the number of software providers out there today. "The consolidation of tax preparation software companies gives us fewer choices and will probably increase our software fees." Leonard is faced with the decision of whether to pass these fees on to his clients. Still, serving his customers is a top priority, which leads to his second concern. "As the complexity of the tax code continues to grow, our community needs better customer support from software companies to ensure that we are completing returns properly and adequately."

Efrain Ruiz, from Mahopac, NY, on the other hand, feels that the industry has benefited from competition among software developers. "In my twenty years as a tax professional, I've seen an increase in the level of accuracy, a reduction in the number of common processing errors, and a decrease in processing time by both federal and state authorities as a result of e-filing. I've also seen an improvement in the auditing process resulting from the continuous enhancements to tax preparation software and the IRS' ability to interface with these vendors."

It's great when you find a software program that meets your needs. What's not so great is when you have to struggle through a busy tax season with a program that under-performs.

"Obviously, changing software products is not something we really want to do, but a frustrating tax season is worse," says Millerchip. She advises that if you have a problem with your current software provider, you should share your grievances with the company and ask when you can expect improvement. "If there is none, change may be in order." But where do you start?

For 22 years, NATP has gathered information about tax software products and compiled them into a supplement to assist you in making an informed tax software decision. The information we've compiled comes from two sources—the software vendors and the NATP members who completed the survey. This year, we received 3,842 member responses to our survey—over a 20-percent increase from last year.

Bruce Harlow, EA, an NATP member from Escondido, CA, finds the information in NATP's annual supplements useful. "I took the past five year's worth of information contained in these survey results to start my own spreadsheet and narrowed down the available choices. The software I chose is

forward-thinking, and the customer support is outstanding. The ease of moving from here to there within the program is great. The program integrates well with all the major accounting software programs, making tax preparation a whole lot easier." Following are some of the features Bruce evaluated to find the right tax software program for his office.

Software packages generally come in two forms. The "form oriented" style allows the preparer to complete the return in front of the client, many times with supporting worksheets to list the components that make up a line entry. The preparer is usually able to view the return on the monitor, as it would

appear on paper. "Worksheet oriented" programs are set up differently by each software vendor. A preparer who is used to working with forms may find this type a little more difficult at first. Some programs allow a "heads down" form of data entry that requires only a code number for the data field on the worksheet followed by the numeric and/or alphabetic data. This capability

allows a skilled 10-key/typist to enter data without being concerned about matching the data fields on the screen with those on the worksheet.

Price is always a crucial consideration. Some software companies include corporation, partnership, and fiduciary software, laser software, and related state programs for one price, while some companies list them separately. Most software companies offer discounts based on the date the order is placed. Be sure to research what extra features are included in the price of software.

The shipping date is another important factor. The earlier you receive the package, the more time you'll have to work with it before the rush of tax season arrives. Pending tax legislation or legislation passed close to the end of the year can affect the release of forms, which will affect the shipping date of some programs. With many packages providing web-based downloads for updates, late-breaking legislative changes are less of a problem. The faster your Internet connection, the less time you'll spend downloading updates.

Changing tax software packages can be more difficult than choosing one for the first time. Many software providers have conversion programs that convert the data from your old program to their program. Just like any other software program, conversion programs may contain bugs. Be sure to verify that all information has been transferred correctly.

Remember, as a paid tax professional, you are responsible for the accuracy of the entire tax return, including the correct reporting of all income and expenses. Keep in mind that tax software is not infallible. It's imperative that you understand the complicated rules of alternative minimum tax, net operating losses, and the domestic production activities deduction, to name a few. Some software may require complicated calculations before the correct deduction is entered on the tax return. Relying only on your software and not your knowledge may be a critical mistake.

Eighty-five percent of respondents indicated they will use the same tax software program again next year.

The average survey respondent has been in the tax preparation business for 22 years, averaging a number of 496 returns prepared during the 2008 tax season, and with an office size of three people.

When asked about the most important aspect when choosing a software program, “reliability” received the most responses (63%), followed by customer support (14%), ease of use (13%), and price (10%).

Sixty-seven percent of respondents either used Drake, ProSeries, ATX™ (1040, 1040 Office, MAX®, MAX® Office, Total Tax Office™), or Lacerte. Eighty-five percent of respondents said they will use the same program next year.

Ninety percent of respondents offered e-filing in 2008, with 86 percent of returns e-filed. Ninety-two percent of respondents plan on offering e-filing in 2009.

**Note about e-filing:** According to the IRS website, the 87.3 million e-filed returns accepted through July 5 topped the more than 79.9 million electronically filed returns received for all of 2007. It’s also a 12.39 percent increase over last year at this time, with most of the increase coming in March and April. Taxpayers who filed for extensions can use e-file until October 15.

*Software brands were listed if at least one percent of respondents used the program.*
